

ABSTRACT OF THE DISCLOSURE

Distributor systems supply a stationary fuel-cell system with a combustible via a combustible source. The stationary fuel-cell system is assigned to one or more buildings arranged in a stationary quarter. The distribution system serves for supplying the building or buildings with power and/or heat, and the distributor system has, in the stationary quarter, an extraction station, assigned to the combustible source, for supplying mobile consumers with a combustible or with a fuel extracted from the latter, the mobile consumers having a mobile fuel-cell system and a storage tank.
